

Excellent Propagation Predicted Between Europe and Navassa!

In a few weeks, the Navassa Island DXpedition will be on the air. The Navassa team is ready and anxious to work the DX'ers of Europe. Study the following images and descriptions to help you make your Navassa Island QSO.

The Navassa team wants *your call* in their log.

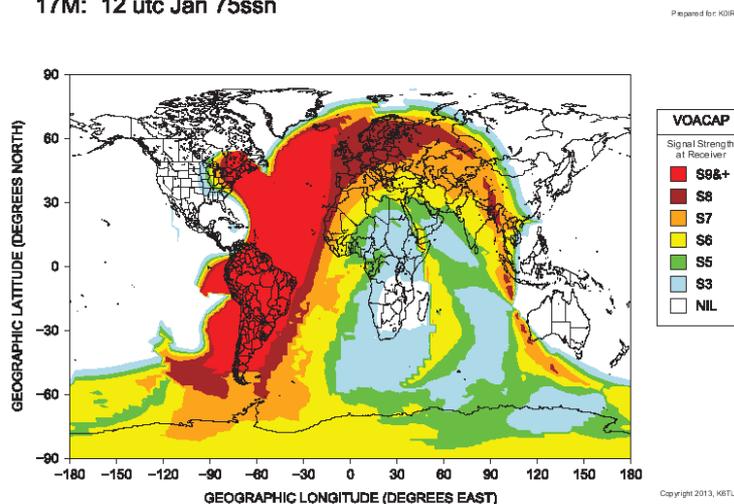

20M: 11 utc Jan 75ssn

20 meters will be the band the Navassa team plans to activate at every opportunity, 24 hours a day if possible. The band is predicted to be well open to Europe by 1100 UTC with signals levels from S7 to S9.

Twenty meters will be the “workhorse” band. This is a band to focus on for “an all-time new one.”

17M: 12 utc Jan 75ssn

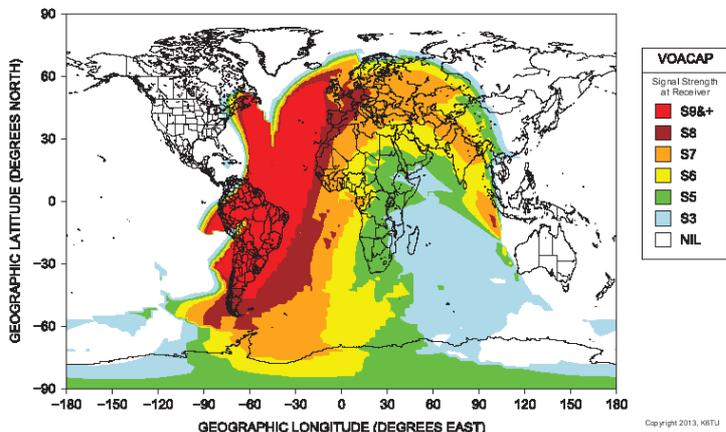

17 meters also offers an excellent chance for European DX'ers to work Navassa Island. The band is expected to open by 1200 UTC with signal levels from S7 to S8 or 9.

This band will also be open many hours of the day.

15M: 12 utc Jan 75ssn

Prepared for K0IR

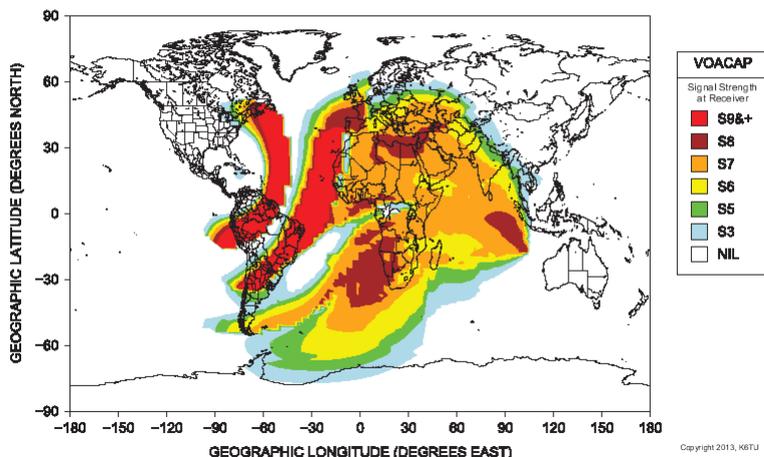

Do you like 15 meters? Have a look at this!

It appears the band will be wide open to Europe by 1200 UTC. This may be the key band for lower powered stations. We will be there with our beams on Europe at this time.

10M: 13 utc Feb 58ssn

Prepared for K0IR

An hour later, at 1300 UTC, predictions indicate that 10 meters will be open to Europe with strong signals, from S5 to S9.

Again, here is an excellent opportunity for low power stations to make their Navassa contact.

12 meters will behave very similarly.

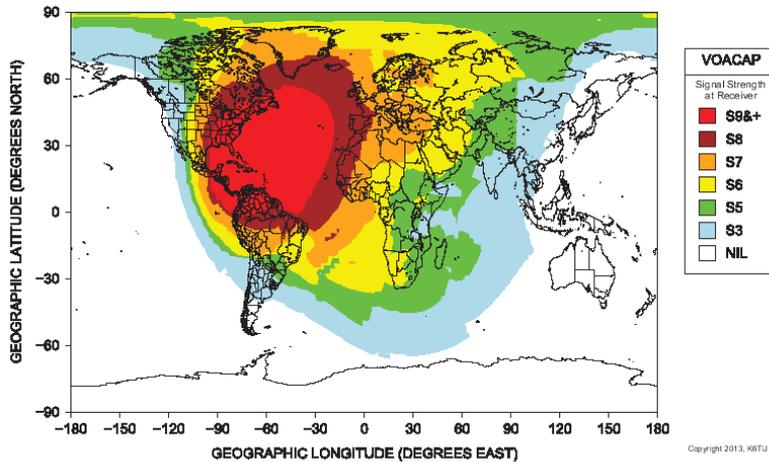

The Navassa team has not forgotten the low bands!

On the following page you will find propagation predictions for 40 and 80 meters.

On 160 meters pay close attention to our sunset time. We will be watching your sunrise times and listening for you. Also, use the 80 meter predictions as a guide.

40M: 22 utc Jan 75ssn

Prepared for: K8TR

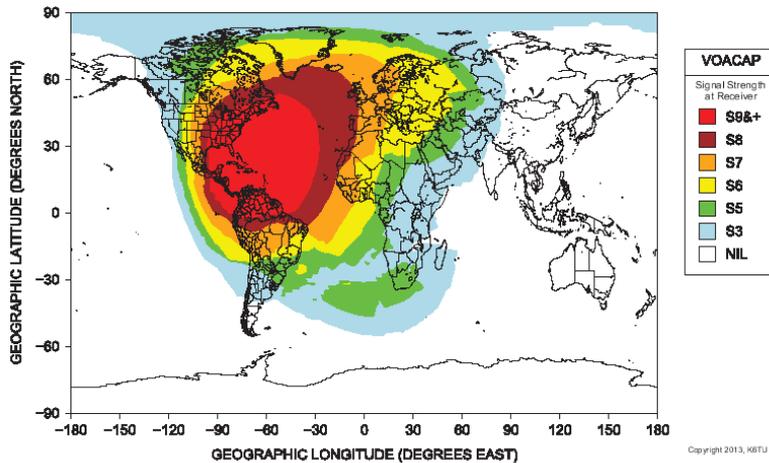

Predictions indicate that by 2200 UTC our signals should be strong in Europe. You should be hearing us and we should be hearing you before the band opens to North America.

This is YOUR time!

80M: 00 utc Jan 75ssn

Prepared for: K8TR

At 0000 UTC our signals sound be well established in Europe. Start listening for us at or just before our sunset. Once again, the early hours of this opening belong to YOU.

Our team is ready. Equipment is packed and on its way to our staging point. We hope to be QRV at the end of January or early February, depending on US Fish and Wildlife transportation and weather windows.

We have large financial commitments to meet. Please consider helping us with a generous donation.
